

Jeudi 25 juin 2026**11H00-12H00 – SALLE CHASSERAL, RTE DE LA CORNICHE 21 – 1010 LAUSANNE****«What We Count, What We Miss: Rethinking Mental Health Service Evaluation»****INTERVENANTE**

Sara Evans-Lacko is a Professor at the Irsay Institute, Indiana University and a Visiting Researcher at the London School of Economics and Political Science. She is a mental health services researcher with a particular interest in the role of health services and social support in the prevention and treatment of mental illness. Her research addresses key issues in global mental health using interdisciplinary methods integrating insights from public health, psychiatry and economics. Her current projects develop and evaluate interventions to improve access to care and support, reduce stigma and disrupt the dynamic between mental health and poverty which generates and reproduces inequalities over the lifespan. She has a PhD in Health Policy and Management, from the Johns Hopkins Bloomberg School of Public Health.

RESUME

Social and structural conditions shape mental health and mental health in turn shapes life chances such as education, employment and social participation. These same conditions influence who reaches care, who stays in care and who benefits from it. Drawing on studies of structural barriers to care including cash transfer programmes, I examine what we capture, and what we leave out, when structure is set aside, and how interventions that act on structural conditions might better target mental health. The conclusions we draw about what works can depend on how the social environment is measured, and on whether we ask for whom and under what conditions an intervention helps. Attending to structure, to how interventions combine and to whether average gains are shared or concentrated is therefore central both to designing mental health interventions and to evaluating them.

Recommandé par la Société Suisse des Spécialistes en prévention et santé publique (SPHD) pour la reconnaissance de la formation continue.
